

## PVC Insulated Cables

For Automobiles

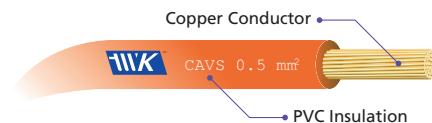

This cable is an improved type of AVS cable having thinner conductor and insulation ,

hence reducing its diameter and weight .

the stranded conductor wires of the cable are compressed into a round cross – section ,

however its performance remains comparable to the AVS cable .

The main uses of this cable is for low – voltage circuits of automobiles.

**Construction :**

**Conductor** : Round compressed stranded annealed copper wires

**Insulation** : PVC

Nominal Cross-Sectional Area <b>mm<sup>2</sup></b>	Conductor			Nominal Insulation Thickness <b>mm</b>	Overall Diameter		Conductor Resistance at 20 °C <b>ohm / m</b>
	Stranding	No / mm	<b>mm<sup>2</sup></b>		<b>mm</b>	Standard	
0.3	7 / round compressed	0.3716	0.7	0.35	1.4	1.5	0.0502
0.5	7 / round compressed	0.5629	0.9	0.35	1.6	1.7	0.0327
0.85	11 / round compressed	0.8846	1.1	0.35	1.8	1.9	0.0208
1.25	16 / round compressed	1.287	1.4	0.35	2.1	2.2	0.0143

This cable is used for low – voltage circuits in general circuits , instrument circuits , control circuits and other circuits of automobiles.

**Construction :**

**Conductor :** Stranded annealed copper wires

**Insulation :** PVC

This cable is a thin insulation cable used in low – voltage circuits of automobiles .

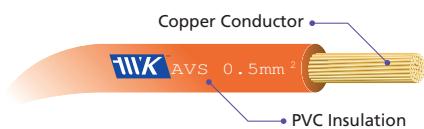

**Standard : JASO D 611**

It aims to reduce the diameter and weight of the cable without losing the performance of conventional type AV cables.

**Construction :**

**Conductor** : Stranded annealed copper wires

**Insulation** : PVC
